Facility Grid Launches Operational Readiness, the First Commissioning Solution to Provide Comprehensive Insight into Overall Project Health

*The Cloud-based solution provides context- and insight-rich visibility into progress, scheduling, and handover readiness, in real time.*

Brookline, MA., October 27, 2020 - Facility Grid Software, the leader in cloud-based commissioning (Cx) software, today announced the release of its Operational Readiness solution. A first-of-its-kind solution, Facility Grid’s Operational Readiness solution extends traditional Cx software capabilities by enabling all the key stakeholders, including building owners, contractors, Cx providers, to stay aligned throughout the build and Cx processes by providing information essential to decision-making in real time. The solution also integrates with industry-related project management software and applications.

“When it comes time to deliver a facility, you can’t afford to take chances - every system and piece of equipment needs to be ready to operate. Every staff member needs to be fully trained. Every piece of handover documentation needs to be in place,” said Eric Forman, CEO, Facility Grid Software. “Achieving that, especially with complex projects and an increasingly remote environment, requires a new approach, which is why we created our Operational Readiness solution.”

Current Cx software applications only provide a snapshot of activities and don't tie in seamlessly with the project schedule or give all the stakeholders the context and insight needed to make decisions, especially if something doesn’t go according to plan.

**Scheduling & Handover Ensure Buildings Operationally Ready**

Facility Grid’s Operational Readiness solution gives all stakeholders 360 degree visibility into the project’s readiness empowering users with real time tracking of all commissioning and handover activities, milestones and impact on project schedule. This insight enables stakeholders to make data-driven decisions around the project. Specifically, the solution facilitates tracking equipment and system testing, monitors progress of personnel training and readiness as well as handover deliverables, and identifies issues and critical systems that require immediate prioritization.

“Often Cx activities get lost in the construction schedule, but Facility Grid’s Operational Readiness enables our team to identify all Cx tasks in the overall schedule to keep them on everyone’s radar,” said Vince van Oostenbrugge, CCP Director of Commissioning, ETC Group.
“This allows for better communication and keeps everyone aligned throughout the project. Operational Readiness also highlights what's being missed or falling behind to assist the project team in making the informed decisions on the steps to get back on track.”

Available Now

About Facility Grid

Used by some of the world’s largest commissioning providers, construction companies, and building owners, Facility Grid commissioning software streamlines and centralizes the commissioning process, giving all stakeholders visibility and insight – where and when they need it. Facility Grid helps keep some of the world’s largest and most complex projects on track, and on time. Find out how we can help yours, too. To learn more, contact us at info@facilitygrid.com.
