Facility Grid Launches Embedded App and Seamless Integration with Procore

Facility Grid customers that use Procore are now able to obtain insight into true project health and the operational readiness of buildings' assets and personnel directly within Procore

Brookline, MA., May 25, 2021 - Facility Grid Software, the leader in cloud-based commissioning (Cx) and operational readiness (OR) software, today announced the official launch of its Embedded App and seamless integration with Procore, a leading provider of construction management software. As part of the launch, Facility Grid joins the Procore App Marketplace to deliver its solutions to Procore users worldwide.

Used by some of the world's largest building owners, construction companies and commissioning providers, Facility Grid brings transparency to the commissioning and quality control processes ensuring project stakeholders are fully informed on the state of operational readiness of buildings and overall project health. Facility Grid's software is now seamlessly integrated with Procore to provide one place to look for all information related to the status of the building's assets, issues and the associated activities and milestones for immediate insight into overall project health.

"We are excited to join the App Marketplace and bring Facility Grid to more Procore customers," said Eric Forman, CEO, Facility Grid. "From within the Procore interface, our commissioning and operational readiness solutions will provide 360-degree visibility into project health, including the issues log, enabling stakeholders to make data-driven decisions around critical activities in real-time."

Issues and Observations Real-Time Synchronization

The integration feature will allow two-way synchronization of Facility Grid's Issues Log with Observations in Procore in real time. Once projects are linked between Facility Grid and Procore, users can create and respond to issues within Facility Grid or create and comment on commissioning observations in Procore. All content, including attached pictures and documents are synched between the two platforms automatically.

Cx Process Timeline Monitoring & Close Out for Delivering Operationally Ready Buildings

The embedded Facility Grid solution will bring the Cx program to everyone's radar directly within Procore providing the visibility needed for on-time and on-budget delivery of construction projects. Facility Grid customers that use Procore will now also have access to its Operational

Readiness solution directly within Procore, which features Cx process timeline monitoring and closeout functionality. The solution provides users with real time tracking of all Cx and turnover activities, milestones and their impact on the project schedule. Additionally, the solution will facilitate tracking status of the operational readiness of equipment and systems and will monitor progress of the owner's personnel training as well as handover deliverables. Lastly, the solution will identify the status of critical issues and activities that require immediate prioritization.

"Facility Grid's Embedded App and Integration will provide our mutual customers with the transparency and insight into all commissioning and quality control activities without having to leave Procore, ensuring projects are closed out in a timely manner with the highest attention to quality," said Brian Smith, Business Development Manager at Procore.

Available Now

Facility Grid's Commissioning and Operational Readiness solutions are now available on the Procore App Marketplace.

About Facility Grid

Used by some of the world's largest building owners, construction companies and commissioning providers, Facility Grid commissioning and operational readiness software solutions streamline and centralize the Cx process, giving all stakeholders visibility and insight – where and when they need it. Facility Grid helps keep some of the world's largest and most complex projects on track, and on time. Find out how we can help yours, too. To learn more, contact us at info@facilitygrid.com.
